Contents

1	Fourier Series and Initial Boundary Value Problems	1
1.1	Fourier's method	1
1.2	Mathematical analysis on Fourier's method	4
1.3	Asymptotic behavior of solutions	8
1.4	Nonhomogeneous initial boundary value problem	9
1.5	Application to other equations	11
2	Distributions and Fundamental Solutions	19
2.1	Distributions	20
2.2	Tempered distributions	31
2.3	Tensor products and convolutions and of distributions	38
2.4	Sobolev spaces	42
2.5	Fundamental solutions to PDEs	48
2.6	Asymptotic behavior of solutions to the Schrödinger equation	64
3	Laplace Operator and Eigenvalue Problems	67
3.1	Boundary value problems for the Laplace equation	67
3.2	Solving the boundary value problem	71
3.3	Eigenvalue problems	74
3.4	Compact Hermite operators	76
3.5	Eigenvalues and eigenfunctions of the Laplace operator	83
3.6	One-dimensional eigenvalue problems	88
4	Initial Value Problem for Nonlinear Schrödinger Equations	91
4.1	Nonlinear Schrödinger equations	91
4.2	Various inequalities	92
4.3	Existence and uniqueness of local-in-time solutions	99

4.4	Existence of global-in-time solutions	109
4.5	Non-existence of global-in-time solutions	114
5	Standing Wave Solutions to Nonlinear Schrödinger Equations	119
5.1	Standing wave solutions	119
5.2	Variational formulation	120
5.3	Extremum value problem	125
5.4	Existence of standing wave solutions and their stability: $1 < p < 1 + 4/n$. .	132
5.5	Existence of standing wave solutions and their instability: $1 + 4/n < p < p^*(n)$	143
A	Some Background Materials	153
A.1	Calculus	153
A.2	Lebesgue integration	154
A.3	Functional analysis	155
A.4	Interpolation inequalities	159
A.5	Symmetric decreasing rearrangement	160
B	Classification of PDEs	165
	References	169
	Index	170
