Special issue on advances in continuous optimization on the occasion of EUROPT 2015

Theory and methods for continuous optimization and their application to practical problems continue to be of great value to practitioners. The aim of this Special Issue is to disseminate the best of the work presented at the 13th EUROPT Workshop on Advances in Continuous Optimization: EUROPT 2015.

TOPICS OF INTEREST

The major topics of interest are continuous optimization theory, algorithms, software and applications. It is expected that there will be a particular focus on

- Large-scale optimization
- Linear algebra techniques in optimization

SUBMISSION

Papers are required no later than **November 1, 2015**

The refereeing outcome should be provided by **February 29, 2016**

Final papers should be submitted by **April 30, 2016**

Please submit manuscripts through the Springer online system (if you are a new author to the system you will be required to create a system login). <https://www.editorialmanager.com/mmor/> and, when you come to "Choose Article Type", select "S.I.: EUROPT 2015".

Submission of a manuscript implies: that the work described has not been published before; that it is not under consideration for publication anywhere else; that its publication has been approved

by all co-authors, if any, as well as by the responsible authorities – tacitly or explicitly – at the institute where the work has been carried out.

The publisher will not be held legally responsible should there be any claims for compensation.

The journal imposes no hard limits on the paper length as long as what authors write is important. A paper length of about 20 pages in journal format is appreciated. Submissions that exceed 40 pages in journal format (including illustrations and references) should however be accompanied by a short justification as to why a briefer discussion of their research results is not possible.

Full author instructions may be found here:

<http://www.springer.com/business+&+management/business+information+systems/journal/186>

Any questions related to this special issue should be directed to:
