The future....

Chris Sangwin

School of Mathematics
University of Edinburgh

April 2019

Thank you all...

Thank you all...

STACK has a very encouraging future.

- 895 registered sites
  Lots of known users.
- Many languages
- Commercial partners
- Support in Moodle and ILIAS

Where are we now....

(29 April 2018)

The traditional university

How will people learn in the future?

- What is a modern "book"?

How will people learn in the future?

- What is a modern "book"?
- Mastery learning as a practical approach. (Bloom)

How will people learn in the future?

- What is a modern "book"?
- Mastery learning as a practical approach. (Bloom)

Technically possible by committed staff, as part of their duties. (This *is* a lot of work....)

How will people learn in the future?

- What is a modern "book"?
- Mastery learning as a practical approach. (Bloom)

Technically possible by committed staff, as part of their duties. (This *is* a lot of work....)

Previous online projects have required huge teams.

How will people learn in the future?

- What is a modern "book"?
- Mastery learning as a practical approach. (Bloom)

Technically possible by committed staff, as part of their duties. (This *is* a lot of work....)

Previous online projects have required huge teams.

Such materials scale well.

Setting out on a journey....

(28 Oct 2018)

We have the potential to be the very best....

Areas of activity

1. Community building and material sharing

Areas of activity

1. Community building and material sharing
2. How do we use these tools?

Possible "complete book" markup...

... blurs quiz/stateful features (very helpful way!)

We have lots of features...

We have lots of features...

Let's base features on real need, and mathematical principles.

We have lots of features...

Let's base features on real need, and mathematical principles.
How can we assess mathematical proof?

Features planned for next release

- Write a parser for student input.
  (We've always relied on Maxima)

Features planned for next release

- Write a parser for student input.
  (We've always relied on Maxima)
- Better functions for reasoning by equivalence

Features planned for next release

- Write a parser for student input.
  (We've always relied on Maxima)
- Better functions for reasoning by equivalence
- Base-N support.

Features planned for next release

- Write a parser for student input.
  (We've always relied on Maxima)
- Better functions for reasoning by equivalence
- Base-N support.
- More input options for validation.
  "Allow empty", "ensure positive"

Features planned for next release

- Write a parser for student input.
  (We've always relied on Maxima)
- Better functions for reasoning by equivalence
- Base-N support.
- More input options for validation.
  "Allow empty", "ensure positive"
- More compact validation feedback

  (We've always relied on Maxima)
- Better functions for reasoning by equivalence
- Base-N support.
- More input options for validation.
  "Allow empty", "ensure positive"
- More compact validation feedback
- Better support for JSX graph (help needed!)

It can all feel a bit lonely

STACK meeting 2020

- 27th & 28th April 2020.
- Tallinn University of Applied Sciences
- Oksana Labanova & Anne Uukkivi
